

Enterprise Mobility Services from GCI

Take Your Wireless Networking Practice to the Next Level

With customer mobility requirements spanning scalability, security, BYOD and the proliferation of the Internet of Everything (IoE), providing total solutions has become increasingly more challenging. You don't have to go it alone... Global Convergence Inc.'s (GCI) enterprise mobility practice can help.

As the channel's service and solutions' company, GCI has extensive capabilities to provide both technology expertise and global coverage to partners serving the enterprise mobility market.

GCI Delivers on Enterprise Mobility

Our enterprise mobility solutions are a key tool for solution providers striving to grow their business and provide high value to their clients. GCI can help you whether you're upgrading a single site or deploying a complex, multiservice network by providing the critical resources required to ensure your success.

Network Assessments • Deployment • Security • Managed Services

Network Assessments

Successful technology deployment depends on an accurate assessment of an organization's current network, security state and the overall readiness to support the proposed solution and compliance with policies and best practices. GCI's Service Solutions Group will help you evaluate the readiness of your client's network infrastructure and plan for the statement of work to ensure you can support the project.

Deployment

GCI's installations follow a proven methodology to ensure the end project is on-time and within budget. After the initial configuration and installation and integration phase, we will validate and optimize performance to seamlessly support end user applications.

Wireless Security

Enterprise mobility environments create specialized security needs that demand both knowledge in security architecture and wireless technology. Our engineering resources have design and implementation expertise in many disciplines, and extensive networking experience.

Managed Services

Leverage our 7x24x365 Global Services Center to offer wireless managed services to your clients.

Leverage GCI for Your Enterprise Mobility Projects:

- Capabilities across multiple vendors and technologies
- Experienced PMI-certified Project Managers on staff
- Time-tested implementation processes
- Extensive network of certified, experienced on-site field engineers
- White label services put your brand and expertise front and center with your clients
- Flexible installation schedule tailored to your clients' needs

Our extensive expertise can assist you in providing a solid wireless solution for your clients.

Taking Your Wireless Networking Practice to the Next Level

Wireless Security Expertise

Today, wireless applications have migrated from casual wireless to true mission critical applications, and security considerations are vital. Our GCI team of consultants and engineers includes certified network security experts who design and build network security architectures to address a variety of security needs, including:

- Identity & Access Management
- User & Device Authentication
- Data Privacy and Encryption
- End-to-End Session Security
- Intrusion Detection
- Virtual Private Networking
- Perimeter Security
- Policy Management
- DDI (DNS, DHCP, & IPAM)

GCI and Partner Expertise: Better Together

Our services combines core network, wireless, cellular, security, and data center technologies with our partners' capabilities to deliver a seamless solution for your customers.

GCI Services Ensures Success

With our global reach in 170 countries, proven methodologies, excellent partner satisfaction levels and a variety of vendor supported offerings, we will work together as a team to deliver the highest level of services specific to your needs. **Let us be your trusted partner.**
